

Quality Lung Care

At Pallitus Health Partners, our mission is to improve our patient's quality of life. As advanced lung disease progresses, the impact can be overwhelming and affect one's quality of life. While advanced lung disease cannot be cured, symptoms of the disease can be managed if closely monitored. That's where Pallitus Health comes in!

Our Lung Care program provides palliative care to individuals with advanced lung disease by customizing a plan of care to fit the needs and goals of each patient. Care is provided wherever a patient calls home and in consultation with the patient's pulmonologist (lung doctor).

Emergency room visits and hospital re-admissions may be preventable with early detection and management of symptoms. The Lung Care program includes in-home and/or virtual visits by our specially trained Care Team of Nurse Practitioners, Physicians and Social Workers. You'll receive 24/7 clinical support and care coordination to clarify treatment plans, medication regimens and other urgent issues along with our Symptom Management toolkit to help you stay in control of your lung disease.

We're here for you.

While there may not be a cure for lung disease, Pallitus Health Partners is here to help you manage your symptoms.

Lung Care

Specialized care for advanced lung disease

PALLITUS
HEALTH PARTNERS

Advanced lung disease

Advanced lung disease is often associated with a high level of symptom burden that significantly reduces a person's quality of life and can also be very stressful on caregivers.

Pallitus Health provides specialized care to treat the symptoms of advanced lung disease.

At one time or another, someone with advanced lung disease can experience any of the following signs and symptoms:

- Difficulty breathing
- Worsening cough
- Changes in mucus production
- Decrease in alertness or episodes of confusion
- Fever
- Chest pain or tightness
- Poor appetite and/or unintentional weight loss
- Medications may not work like they used to
- New difficulty performing daily activity
- Dizziness
- Swelling (feet, ankles or stomach)
- Poor sleep
- Require oxygen

As these symptoms increase so do trips to the doctor and hospital.

Pallitus Health can help manage the symptoms of advanced lung disease while decreasing or eliminating the need to return to the hospital.

Types of chronic lung diseases we can serve:

- Chronic obstructive pulmonary disease (COPD)
 - Emphysema
 - Chronic bronchitis
- Pulmonary fibrosis
- Interstitial lung disease
- Cystic fibrosis
- End-stage tuberculosis
- Pulmonary hypertension

Program offerings:

- Symptom management toolkit that includes: a symptom tracker, action plan tool, and Lung Care education guide
- 24-hour access by phone to our expert clinical staff for questions and symptom management needs
- Optimized care to reduce or eliminate hospitalizations
- A specialized Care Team that includes Nurse Practitioners, Physicians and Social Worker
- Customized plan of care to fit your goals
- Ongoing education about advanced lung disease
- Collaboration between Pallitus Health Partners and the patient's primary care physician and pulmonologist
- Medications to help shortness of breath, customized to individual symptom needs

Program goals:

- Reduce emergency department visits and hospital readmissions
- Manage advanced lung disease symptoms wherever the patient calls home
- Increase patient and family understanding of advanced lung disease treatment and prognosis
- Improve quality of life

You-centered care.

Pallitus Health Partners Lung Care program helps patients live longer and spend less time in the hospital.
